Vadodara, Gujarat (open to relocation)

Professional Summary

Final-year Information Technology undergraduate (graduating 2027) with hands-on experience building full-stack products with React, Node.js, and Python/Django, alongside applied machine learning and LLM-powered features. Skilled in designing REST APIs, integrating LLM APIs (Google Gemini) with prompt engineering, and debugging multi-service architectures across frontend, backend, and database layers. Strong foundation in Data Structures & Algorithms (Java) and Object-Oriented Programming, with a track record of independently architecting and shipping production-ready systems end-to-end.

Technical Skills

Languages: Python, JavaScript, Java, HTML/CSS, SQL

Frameworks & Libraries: React, Node.js, Express.js, Django, .NET, Streamlit

Databases: PostgreSQL, MongoDB (Atlas), MySQL, SQLite

Tools & Platforms: Git/GitHub, REST APIs, Google Gemini API, Postman, Vercel, Render, spaCy, NLTK

Core Concepts: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks, System Design Fundamentals

Experience

Full-Stack Development Intern

June 2026 – July 2026

Navodita Infotech

Remote

- Architected and deployed **FairShare**, a 3-tier MERN expense-splitting application (similar to Splitwise) with independently deployed frontend (Vercel) and backend (Render), using MongoDB/Mongoose and a React 18 (Vite) + Tailwind CSS frontend.
- Engineered 10+ RESTful API endpoints with Node.js and Express to handle secure authentication (Passport.js, Google OAuth 2.0, JWT, bcryptjs), group creation, and real-time expense logging.
- Delivered 4 core modules – Authentication, Group Management, Expense Tracking, and Balance Settlement – including a centralized debt-calculation algorithm that automates peer-to-peer settlements, visualized with Recharts for a responsive UX.

Projects

WanderMate | React (Vite), Tailwind CSS, Python, Django REST Framework, Google Gemini API, SQLite

2025 – 2026

- Engineered a decoupled Single Page Application using React (Vite) and Django REST Framework, exposing RESTful API endpoints consumed by a client-side JavaScript frontend over JSON.
- Implemented a hyper-local companion-matching algorithm combining spatial indexing with Jaccard Similarity scoring, computed dynamically at query time to pair users by shared travel preferences.
- Integrated the Google Gemini API (gemini-2.5-flash) with prompt engineering and enforced structured JSON response schemas for reliable, parseable itinerary generation.
- Secured the decoupled architecture with session-based CSRF token validation, strict CORS policy configuration via django-cors-headers, and environment-isolated secret keys.

SkillScan-AI | React, Node.js, Express, MongoDB Atlas, Local NLP

2025

- Designed and debugged a self-learning, privacy-first resume analysis platform operating entirely on local NLP, requiring no external AI APIs and ensuring 100% data privacy.
- Used Postman to test and validate REST endpoints across a MERN architecture (React on Vercel, Node.js/Express on Render, MongoDB Atlas), catching and resolving 10+ integration issues before deployment.
- Traced and fixed data-flow bugs across frontend, backend, and database layers to ensure resume uploads consistently produced accurate skill-gap insights.

TravelLoop AI | Python, Django, PostgreSQL, Google Gemini API, spaCy, NLTK

2026

- Architected an NLP-driven travel planning engine integrating the Google Gemini API, implementing robust error handling and retry logic to manage rate limits and API failures.
- Developed a custom Natural Language Understanding (NLU) pipeline using spaCy and NLTK to parse unstructured user queries, extracting entities such as destinations, budgets, and dates.
- Designed a relational PostgreSQL schema via Django ORM to structure and persist parsed trip parameters extracted by the NLP pipeline.

Education

Parul University

2023 – 2027

B.Tech. in Information Technology; CGPA: 7.37/10

Gujarat, India

Certifications & Achievements

- Solved 100+ LeetCode problems in Java covering Arrays, Strings, HashMaps, Binary Search, Two Pointers, Stacks, and Queues.
- Completed **The Complete Full-Stack Web Development Bootcamp** – Udemy, Dr. Angela Yu (62 hours, May 2026).
- Completed **NPTEL Certification** – Computer Networks and Internet Protocol, IIT Kharagpur (Jan–Apr 2025).
- Presented **CashWise**, an AI-driven checkout automation system developed with Pine Labs APIs, at Ideathon 4.0; participated in Parul University Environment Hackathon 2026.
